

Amendments to the Claims:

This listing of claims will replace all prior listings of claims in the application.

Listing Of Claims:

Claims 1-42 (Canceled)

Claim 43 (Currently amended) An information processing apparatus comprising:

display control means for controlling a display of a 3D model and a plurality of virtual planes in the same 3D space, wherein the 3D model is projected on each of the virtual planes;

~~attribution allocation~~ virtual plane selecting means for selecting a position of a virtual plane of the plurality of virtual planes, the virtual plane being displayed with a 3D model in the same virtual 3D space; and

allocating means for allocating attribution information including at least one of dimensions and dimensional tolerance of the 3D model on the selected virtual plane in response to ~~designating~~ an input of the attribution information,

wherein the display control means controls a display of the attribution information allocated on the selected plane in the 3D space.

Claim 44 (Currently amended) An information processing method comprising:

a display control step of controlling a display of a 3D model and a plurality of virtual planes in the same 3D space, wherein the 3D model is projected on each of the virtual planes;

~~an attribution allocation~~ a virtual plane selecting step of selecting a virtual plane of the plurality of virtual planes, the virtual plane being displayed with a 3D model in the same virtual 3D space; and

an allocating step of allocating attribution information including at least one of dimensions and dimensional tolerance of the 3D model on the selected virtual plane in response to ~~designating an~~ input of the attribution information; and

an attribution information display control step of controlling a display of the attribution information allocated on the selected plane in the 3D space.

Claim 45 (Currently amended) A computer executable program product stored in a computer readable memory comprising:

code for controlling a display of a 3D model and a plurality of virtual planes in the same 3D space, wherein the 3D model is projected on each of the virtual planes;

code for selecting a virtual plane of the plurality of virtual planes, ~~the virtual plane being displayed with a 3D model in the same virtual 3D space;~~ and

code for allocating attribution information including at least one of dimensions and dimensional tolerance of the 3D model on the selected virtual plane in response to ~~designating an~~ input of the attribution information; and

code for controlling a display of the attribution information allocated on the selected plane in the 3D space.

Claim 46 (New) The apparatus according to claim 43, wherein the display control means controls a display to position the allocated attribution information corresponding to a selection of a virtual plane, normally on a screen.

Claim 47 (New) The method according to claim 44, further comprising positioning step of positioning the allocated attribution information corresponding to a selection of a virtual plane, normally on a screen.

Claim 48 (New) The computer executable program product according to claim 45, further comprising

positioning step of positioning the allocated attribution information
corresponding to a selection of a virtual plane, normally on a screen.
